- GYM

PROFILE

As a highly motivated and passionate computer science student, my goal is to pursue a fulfilling career in software development . Ability to work independently as an individual contributor as well as a team with excellent team spirit.
where I can utilize my skills in coding, development . I am able adapt to new methodologies and technologies quickly and continuously learning and growing as a developer in order to achieve success in this field.

PROJECTS

- **Wholesale management system**
- Build using JSP , Servlet , JDBC , HTML , CSS in this there is a setup of vendors with login system and user will be displayed the different buttons and the user can select from those functionalities and can select which vendor is selling what item and its color, price ,quantity, addition, deletion of added or updated items and there is a master information system for the vendor to see the all information about the vendors etc. and easy to use system.
- **Timesheet application for employee**
- Build using JSP , Servlet , JDBC , HTML , CSS in this admin will login and ad manager ,manager will add employees and each manager has 3 employees and manager give task employee will login and fill the timesheet and employee can edit their tasks also and manager are able to give rating on scale 1to5 and the employee cant make changes and manager can check employee task and employee can check there own tasks .
- **Math game**
- In this you can choose 3 games Addition , Subtraction ,Multiplication and you will be given 3 life and 15 seconds to give correct answer you will be awarded 10 points for correct answer and one life will be deduced on wrong answer message for right answer , wrong answer and time up will be displayed also total score will be displayed after game finishes.
- **To-Do-list app**
- TO DO List mobile application with add, delete and notification functionality build using java and used clock widget . First you add your task and then set time and then schedule you notification and you will receive notification for your task at the specific time works with multiple task added on your list.
- **CSV reader**
- Commonly used for storing tabular data as spreadsheets or databases and each value is separated by a comma and in this filtering or sorting of the data is performed.
- **Student registration**
- Build using JSP , Servlet , JDBC , HTML , CSS used for student registration and login system for school or collage and student will be displayed with its information and that information can be edited once login successfully and new student can register them in the sign up button on the login page.
